Whether yours is a fleet of two or 2,000, Roadnet Telematics provides clear, detailed oversight of how your vehicles and drivers are operating at any moment, helping you:

- Reduce idling
- Optimize vehicle maintenance
- Assess driver behavior
- Diagnose engine health
- Monitor events
- Eliminate downtime
- Track mileage precisely
One Device.  
All the Answers.

Roadnet Telematics is a road-proven GPS-based telematics solution that has helped commercial fleets realize significant savings in operating costs, ranging from insurance claims to roadside assistance. Roadnet Telematics provides a robust GPS-based, onboard monitoring technology that tracks a critical spectrum of vehicle operating and usage parameters, such as miles driven, engine faults, idling time, seatbelt usage and much more. The result is a clear picture of your fleet’s risk, productivity and maintenance status—and a clear path toward improvement.

• Reduce fleet maintenance costs and optimize lease management  
• Support “green” initiatives by controlling fuel consumption  
• Reduce injuries, vehicle damage and claims costs while helping drivers adopt safer habits  
• Improve the productivity of your fleet and your people

Think about it. The two biggest investments you’ve made in your fleet, namely your drivers and your vehicles, are out on the open road right now—and out of sight. Yes, your drivers may call in at appointed times, but when it comes to knowing their up-to-the-second status and the health of their vehicles, you don’t.

But now you do— with Roadnet Telematics. By deploying this advanced, full-spectrum solution throughout your fleet, you can monitor both driver behavior and vehicle diagnostics against the benchmarks that you select and are mandated by law. Best of all, this actionable control and insight is yours in real time.

The result? Roadnet Telematics takes fleet management to new levels of compliance, risk reduction, cost effectiveness and overall productivity. Now, that’s riding smarter.

REDUCE RISK. SECURE SAVINGS.

Right away, Roadnet Telematics has the potential to save you hundreds of dollars per vehicle every month by monitoring maintenance, engine idling, speed levels, safety issues, and much more.
Reduce fleet maintenance costs through optimization and prevention

- Get the full value from your leases by tracking mileage more accurately than your odometer can
- Schedule preventive maintenance with greater accuracy through precise mileage readings
- Manage miles driven to preserve lease and warranty thresholds and slow wear and depreciation
- Optimize fleet size by identifying under-utilized assets
- Prevent downtime and emergency service by monitoring voltage trend, ignition crank and other performance indicators
- Track and control speed to extend the life of gears, bearings, clutches, suspension and drive trains

Support smarter operations

Want to drive down costs at the pump? Roadnet Telematics can help you eliminate unnecessary miles driven, reduce engine idling, and promote efficient driving practices—all to reduce fuel consumption.

- Manage idling and speed: both idling and speeding accelerate fuel consumption, oil changes, and engine wear. In-cab idling alerts help drivers minimize their idling, while exception notifications can alert supervisors of excessive idling
- Optimize fueling: fuel only when needed to keep vehicles productive and cash flow on track

Monitor risk and promote safety

Roadnet Telematics gives you powerful tools not only for monitoring risky driving behavior, but also for helping drivers eliminate it. Using seatbelts, controlling speed, limiting after-hours use—these are small changes that can mean huge savings for your business in avoiding injuries, vehicle damage and insurance claims.

- See the big picture: Roadnet Telematics lets you monitor a full spectrum of risk factors, including speed, harsh braking and rapid acceleration, seatbelt use, idle time, revving, stops per day, and after-hours use
- Help drivers change: Real-time in-cab alarms alert drivers to speed, idling and seatbelt habits, promoting safer habits and reducing claims costs
- Reduce liability and workers compensation claims: Accident memory and event-based recording capabilities let you recreate and verify at-fault, no-fault or workers’ compensation claims

“Our number one priority is that our drivers get home safely every night. With the implementation of Roadnet Telematics, we’ve been able to see the drivers and their daily activities. Our speeding, idle time, and harsh braking events have decreased as a result.”

Alex Holian, Vice President of Operations
The Chefs’ Warehouse
Get more from your fleet

By measuring the way time is spent throughout your fleet every day, you will better understand the quality of your time investment. Monitoring deviations in time and distance will help you initiate strategies for improved profitability and productivity through a greater understanding of how your customers are being served.

In addition, reducing speed and other factors that contribute to wear and tear, monitoring voltage and more can help you optimize your preventive maintenance schedule and eliminate unplanned downtime. Thanks to Roadnet Telematics, costs associated with out-of-service vehicles can be reduced by up to 25%.

Comprehensive reporting

Roadnet Telematics gives you the auditing and reporting tools needed to ensure accurate IFTA calculations and meet an increasing array of compliance obligations.

Hours-of-Service device

Don’t make a move without it. FMCSA regulations require automated hours-of-service devices installed in many fleet vehicles. The Roadnet Telematics Hours of Service device not only meets all federal requirements, but also records all vehicle movements automatically. A real-time wireless connection pushes this information back to the office. Drivers only need to enter their on-duty or off-duty status through the device’s in-cab touchscreen.

Roadnet Telematics Adapter

Stay on the path by staying on plan. An additional component, the Roadnet Telematics Adapter continuously shares GPS data from Roadnet Telematics (or other third-party devices) with MobileCast®, Roadnet Technologies’ powerful resource management tool. MobileCast is then able to calculate actual service time and identify deviations as compared to Roadnet’s route plan.

What’s under the hood of Roadnet Telematics? Only the most advanced technologies available today:

**ACCELEROMETER: BIG WORD. BIGGER ADVANTAGE.**

Roadnet Telematics’ unique accelerometer technology offers a highly sensitive detection of maneuvers in any direction, including harsh braking, rapid acceleration or even aggressively backing into a loading dock. Identifying such risky driving behavior right away can minimize risk in advance.
In today’s world, with soaring transportation costs and increased competition, you need a partner for the road ahead—a partner who will help you achieve the results needed to sustain and grow your business, raise employee productivity, tap into new efficiencies, and ensure safety standards. For transportation service companies large and small around the world, that partner is Roadnet Technologies.

That’s because at Roadnet Technologies, we know fleet management best—from the loading dock to your customer’s front door and all the miles in between. After more than 25 years of solid experience, we are now the international industry leader in transportation management solutions, with the reputation, financial stability and leading products to back it up. No other provider today can match our track record for delivering measurable results to companies like yours by solving complex transportation issues.

Through advancements within the Roadnet Transportation Suite, we continue to make good on that promise, with global solutions that integrate territory planning, street-level route optimization, mobile delivery execution, GPS tracking, and real-time wireless dispatch. By deploying this comprehensive set of integrated applications, your transportation staff can quickly gain control over every aspect of your order-to-customer process. We also provide you and your employees with the highest standard of dedicated customer service—24/7, 365 days a year, as well as advanced product training through onsite seminars or our Roadnet University.

That’s why you’ll find our products in use at more than 3,400 locations worldwide, optimizing fleet management for over 200,000 vehicles each day. Whether your delivery and service operations involve beverages, foodservice, dairy, bakery, paper, medical supplies, fuel oil and propane, textile linens or other products or services, Roadnet Technologies has a solution for you—based on decades of research and experience within your industry.

Let’s create a new standard of operational success for your business. Find out what we can accomplish together—contact us today at info@roadnet.com or 800.762.3638.
